

Rugged and Waterproof

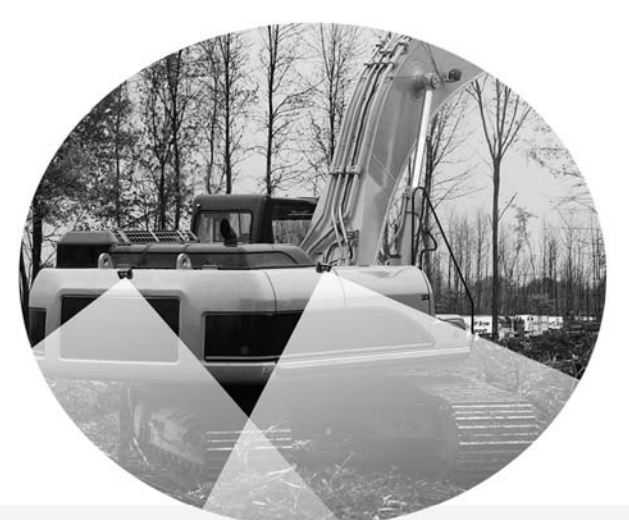

All our cameras have an **integrated heating system** which allows to work in **harsh weather conditions**. Rugged and waterproof, the cameras are **IP69K certified**, they are protected against close-range high pressure, high temperature spray downs.

Optimal visibility

With a **120° field of vision**, the NBS Camera offers optimal visibility of the blind spots of your vehicle.

Gives the driver an **accurate vision of the surroundings**.

Night vision

NBS Cameras **operate in the dark**. It **shifts automatically into infrared mode** in low lighting conditions.

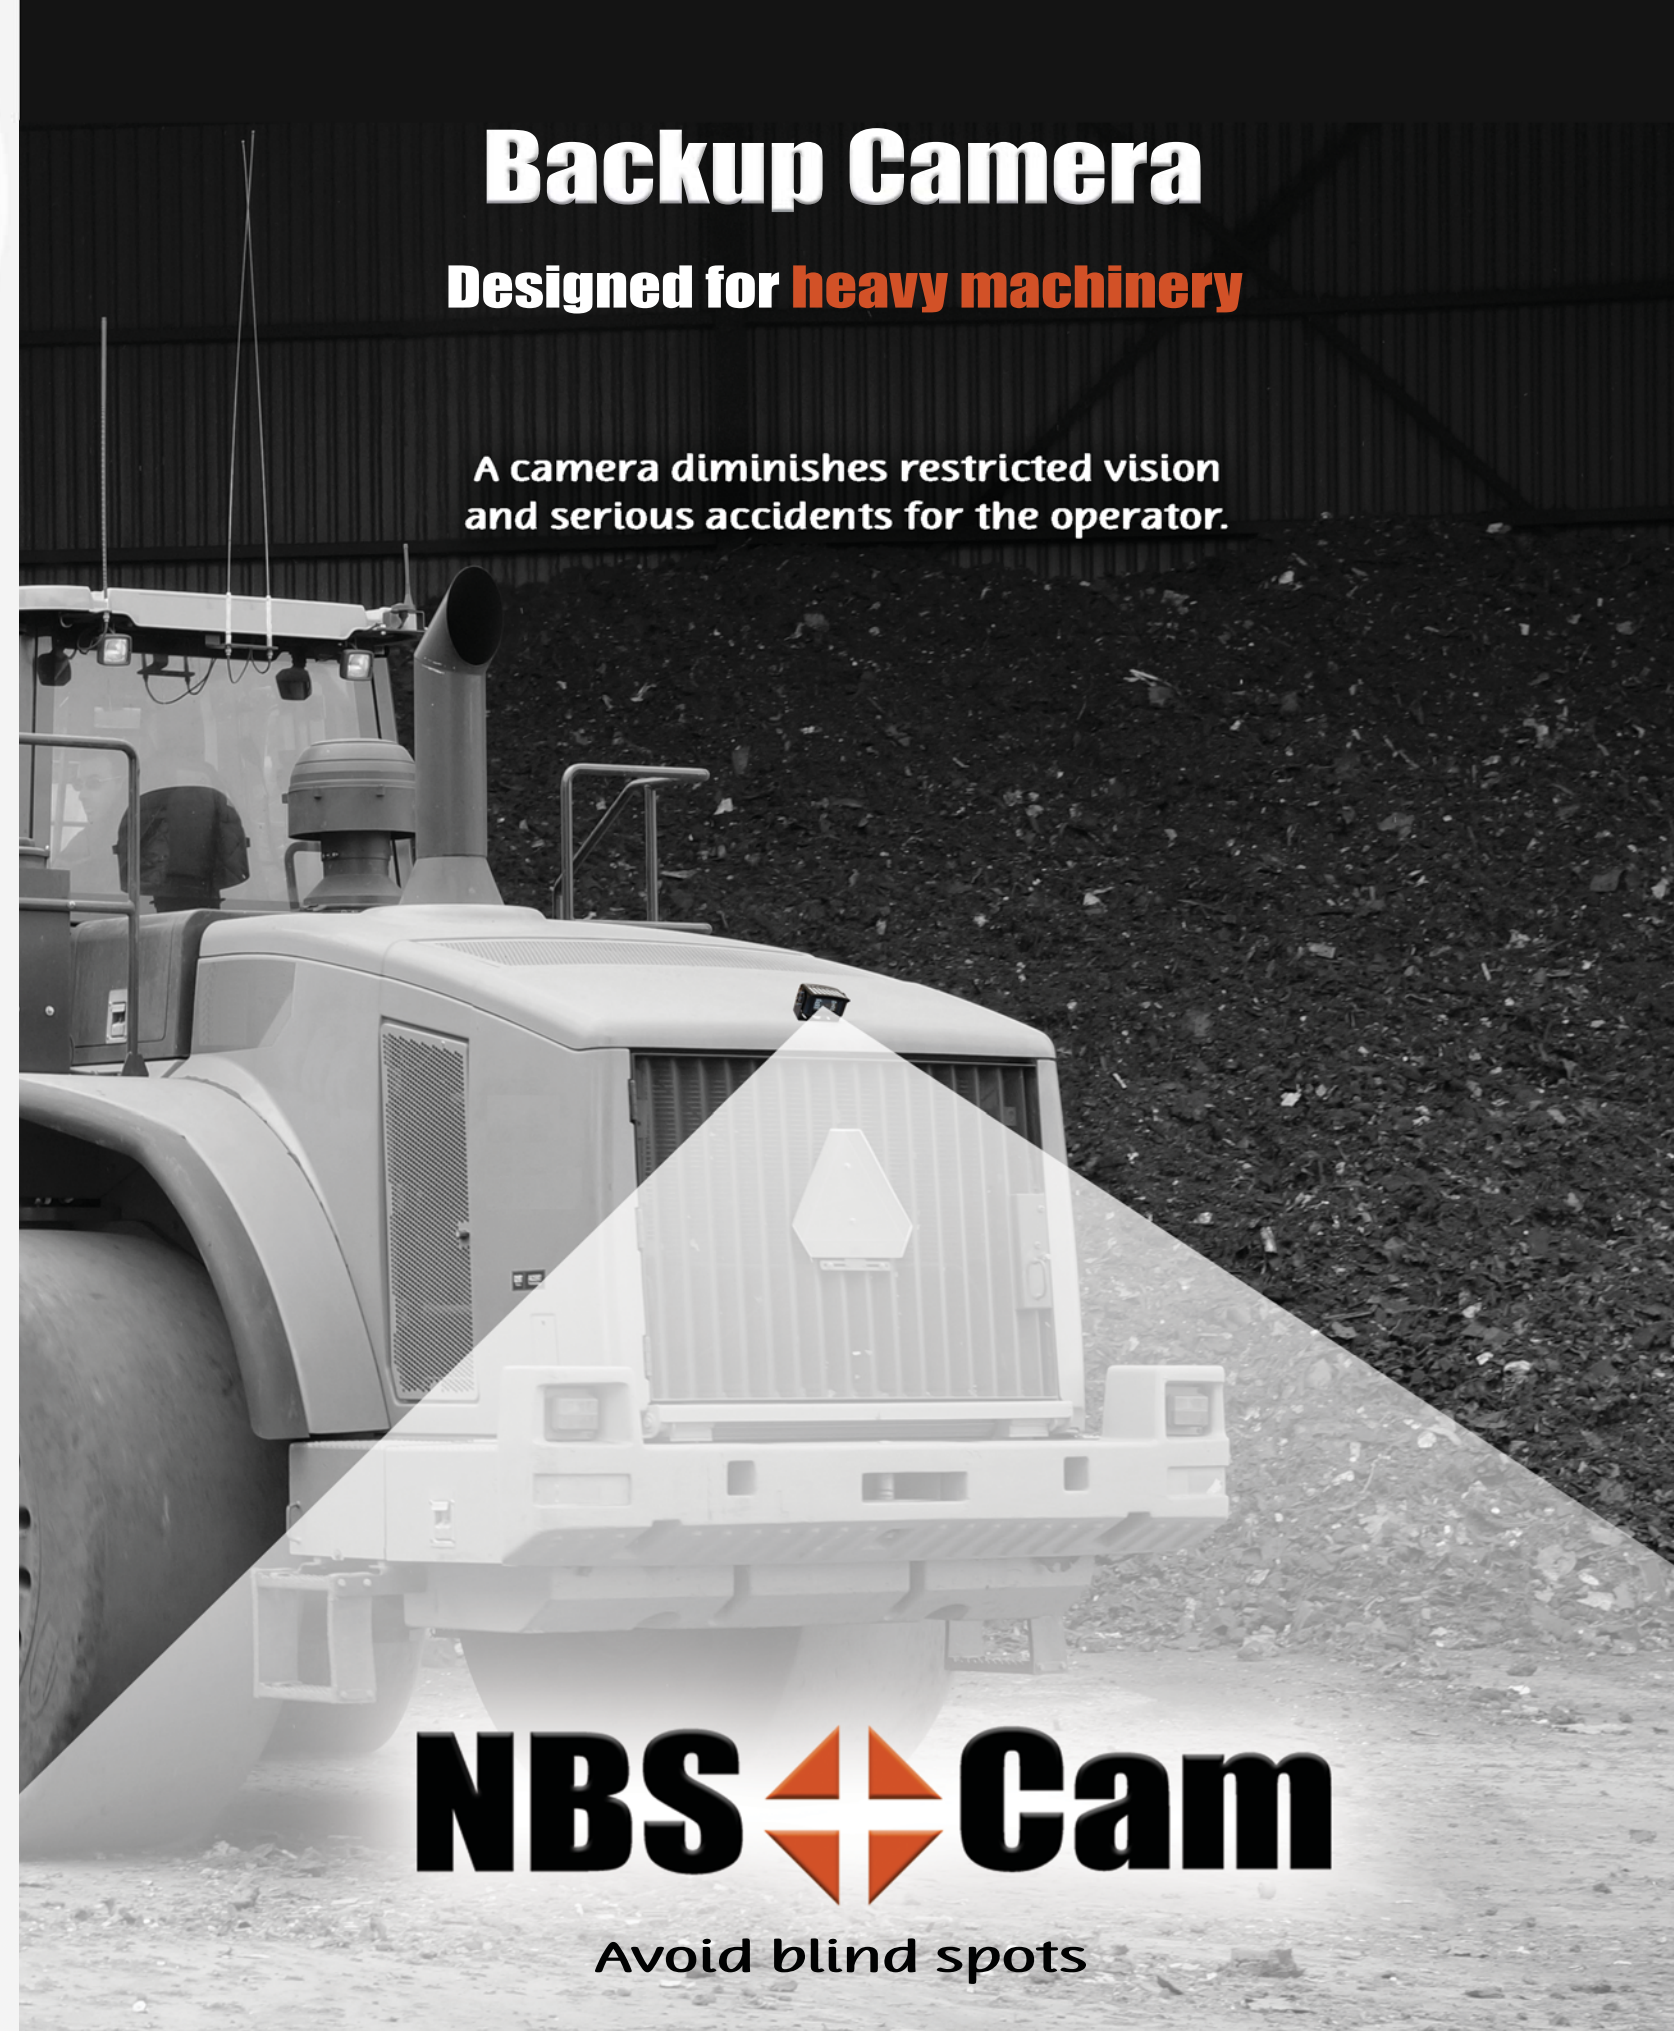

Your authorized distributor:

Backup Camera

Designed for **heavy machinery**

A camera diminishes restricted vision and serious accidents for the operator.

Avoid blind spots

Strengthen Security

Blind spots represent a great hazard for workers, because there are zones that do not appear in the field of vision of the driver.

Restricted vision due to blind spots is the main cause of major and deadly accidents on the work site. A camera system eliminates blind spots for the driver. It is a valuable tool to help the drivers vigilance.

Reduces repair and maintenance costs

Many operators have confirmed that when backing up a loader they are unable to see anything behind them even with the rear view mirror.

Mining trucks functioning in reverse in a blasting zone could avoid sharp rocks which easily damages tires and costs thousands of dollars to replace.

Increase productivity

Certain zones of the vehicle are not visible to the operator while carrying out work. An installation of a wireless camera on the chute of a combine harvester permits the operator to see the level of grain in the trailer, therefore optimizing production.

In addition, the installation of a wireless camera on top of the crusher permits the operator of the loader or shovel to see if there are blockages at that very moment without exiting there machine to see what is going on thus saving time and increasing safety!

Increasing the visibility of the work zone allows the operator to be more productive!

NBS-Cam Standard

CC100

Camera	CC100
Image :	Color CCD
Housing:	Heated (under 10°C)
Field of view:	120°
Protection rating	IP69K
Operating temperature:	-30 to +70°C
Power source:	12-24 VDC
Resolution:	976x494 pixels
Night vision :	12-15m (IR-CUT)
View:	Normal / Mirror
Audio:	Integrated microphone
Material:	Anodized aluminium

CW325

Camera	CW325
Image :	Color CCD
Housing:	Heated (under 10°C)
Field of view:	120°
Protection rating:	IP69K
Operating temperature:	-20 to +70°C
Power source:	12-24 VDC
Resolution:	728x488 pixels
Night vision:	10m (IR-CUT)
View:	Normal / Mirror
Audio:	Integrated microphone
Material:	Anodized aluminium
Transmission range:	120M (without obstacle)

CH100

Camera	CH100
Image :	Color CCD
Housing:	Heated (under 10°C)
Field of view:	120°
Protection rating:	IP69K
Operating temperature:	-30 to +70°C
Power source:	12-24 VDC
Resolution:	1920x1080 pixels
Night vision:	15m (IR-CUT)
View:	Normal / Mirror
Audio:	Integrated microphone
Material:	Anodized aluminium
